NEMA Business Solutions Directory

Find solutions that support your mission.

The NEMA Business Solutions Directory helps emergency management professionals discover organizations with services and expertise relevant to their work.

1 **Browse by category**

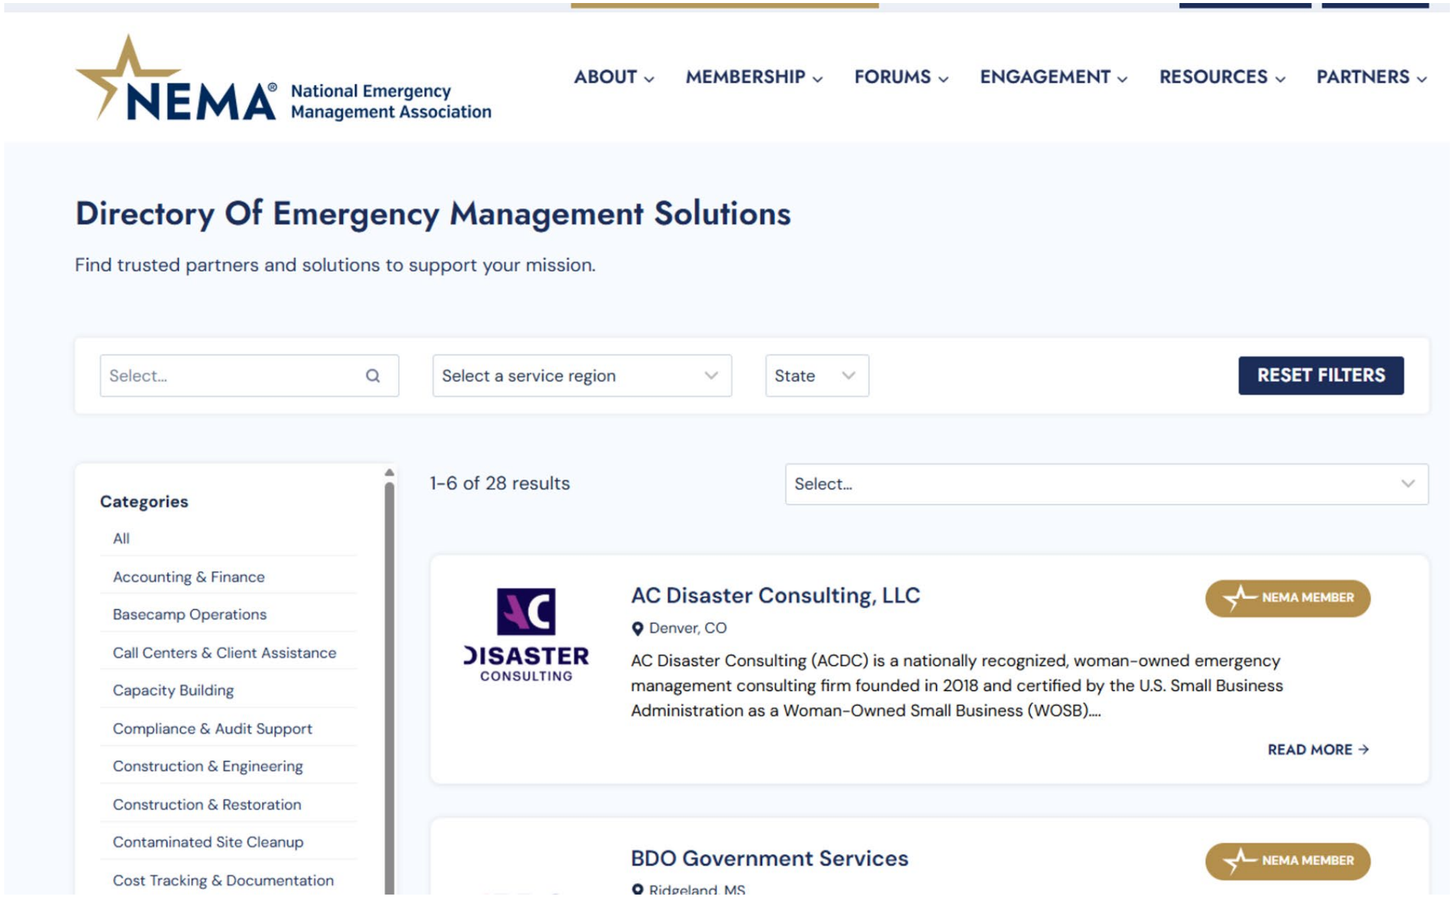

Explore services across emergency management.

2 **Filter your search**

Narrow results by service region and state.

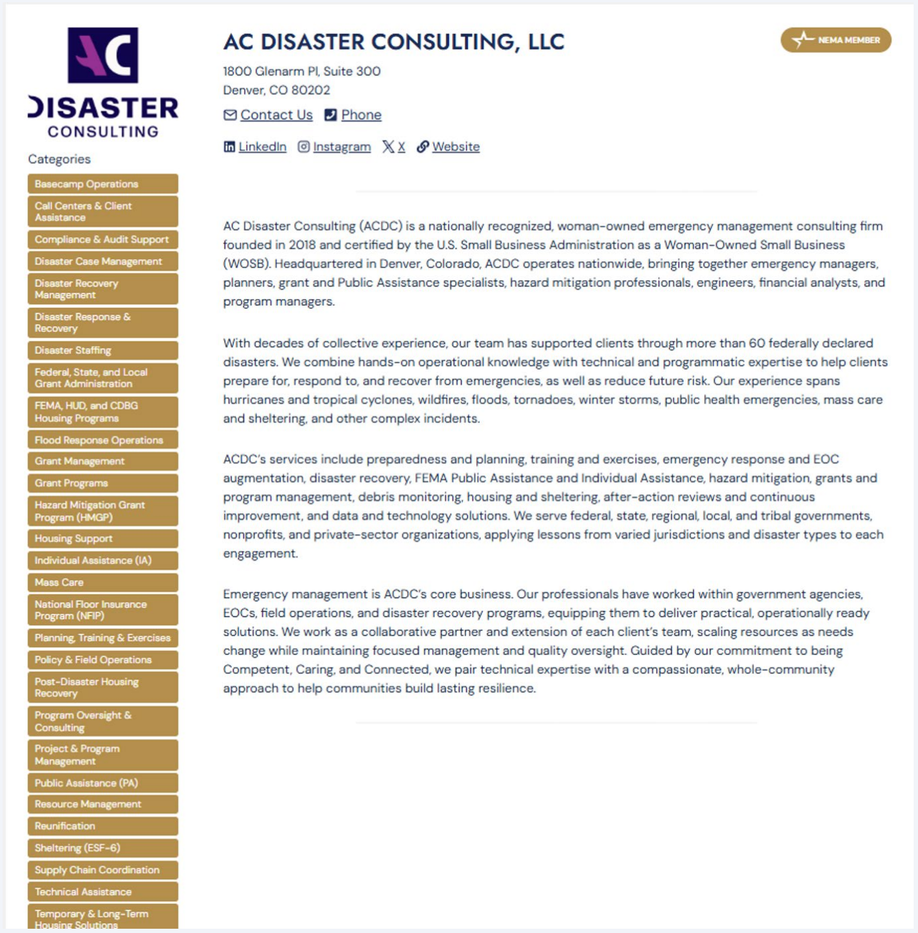

3 **Learn about providers**

Review company descriptions and open detailed listings.

Explore providers. Understand their capabilities.

Individual listings give seekers more detail about an organization, including contact options, service categories, and a description of its experience and capabilities.

AC Disaster Consulting (ACDC) is a nationally recognized, woman-owned emergency management consulting firm founded in 2018 and certified by the U.S. Small Business Administration as a Woman-Owned Small Business (WOSB). Headquartered in Denver, Colorado, ACDC operates nationwide, bringing together emergency managers, planners, grant and Public Assistance specialists, hazard mitigation professionals, engineers, financial analysts, and program managers.

With decades of collective experience, our team has supported clients through more than 60 federally declared disasters. We combine hands-on operational knowledge with technical and programmatic expertise to help clients prepare for, respond to, and recover from emergencies, as well as reduce future risk. Our experience spans hurricanes and tropical cyclones, wildfires, floods, tornadoes, winter storms, public health emergencies, mass care and sheltering, and other complex incidents.

ACDC's services include preparedness and planning, training and exercises, emergency response and EOC augmentation, disaster recovery, FEMA Public Assistance and Individual Assistance, hazard mitigation, grants and program management, debris monitoring, housing and sheltering, after-action reviews and continuous improvement, and data and technology solutions. We serve federal, state, regional, local, and tribal governments, nonprofits, and private-sector organizations, applying lessons from varied jurisdictions and disaster types to each engagement.

Emergency management is ACDC's core business. Our professionals have worked within government agencies, EOCs, field operations, and disaster recovery programs, equipping them to deliver practical, operationally ready solutions. We work as a collaborative partner and extension of each client's team, scaling resources as needs change while maintaining focused management and quality oversight. Guided by our commitment to being Competent, Caring, and Connected, we pair technical expertise with a compassionate, whole-community approach to help communities build lasting resilience.

FOR SOLUTION SEEKERS

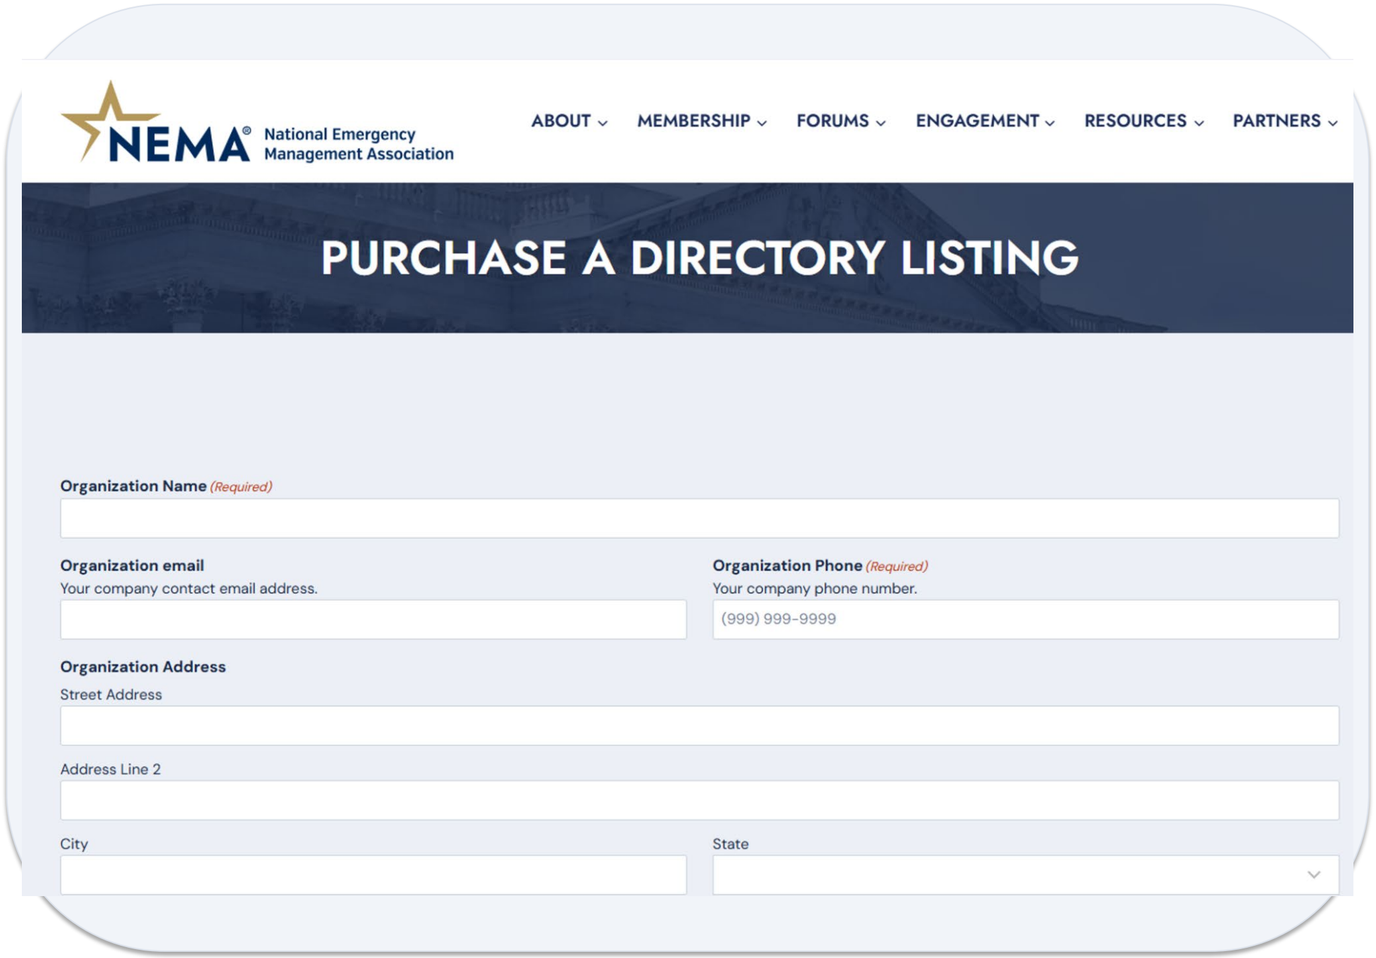

Use listing details to:

- Identify relevant service areas
- Review provider descriptions
- Find contact and website links
- Continue your own due diligence

Listings are informational; users should independently evaluate providers before engaging.

Put your organization in front of the EM community.

The directory also offers organizations a way to present their services to people searching for emergency management solutions.

INTERESTED IN A LISTING?

Make it easier for emergency management professionals to learn about your organization and the services you offer.

GET STARTED

Visit the NEMA Business Solutions Directory and select "Purchase a Listing Today" to review the listing form and next steps.

Use code WelcomeEMSD to waive the fee for the first year.

nemaweb.org/directory/

Resilient Recovery

How partnering with local non-profits can streamline community recovery

Nationwide Authority in Case Management & Social Services

Combining **57+ years of service, 500,000+ clients served since 2023**, and the values and connections to restore communities, Endeavors is currently administering more than **80 state and federal grants to serve vulnerable populations**, including disaster survivors, the unhoused, and veterans.

Rapid Response
24-Hour Deployment

Vetted frontline personnel with **464,557 hours** served in 2025. Fully trained in **trauma response, behavioral management, and crisis intervention**.

More than 1,700 employees and ~2,000 reservists coordination professionals who are **pre-identified and prepared to deploy for unpredictable lengths of time**. Our wide, local network allows us **to identify professionals aligned by geography, availability, and specialized population experience.**

Disaster Experience
Decades of Experience

Trusted partner with FEMA, Texas HHSC, Volunteer Florida, NC Emergency Management, GOHSEP, and more.

In 2025 alone, we helped communities recover from disasters in more than **80 cities across six states** (Florida, Illinois, Louisiana, North Carolina, Texas, and West Virginia), as well as Puerto Rico.

Case Management
800+ Certified Professionals

Decades of frontline expertise in case management, including a training program that is utilized by the University of Texas system.

As a team, our case management professionals rely on our Core Competencies to **restore hope and strengthen communities**: Personalized Navigation Support, Mental Health & Wellness Training, Rapid Response & Recovery Services, and Experience Sheltering Vulnerable Populations.

NEMA®

Disasters Don't Create Vulnerability.

They Expose It.

Nearly one-third of Americans have characteristics that make them socially vulnerable to disasters and less able to recover from their impacts.

- Poverty
- Households experiencing housing instability
- Individuals with access and functional needs
- People navigating behavioral health challenges
- Older Adults
- Financial vulnerable families

Nonprofits provide the networks that government cannot.

Because we are part of the community before disaster strikes, we bring:

Awareness

We know where vulnerable populations live and what they need

Trust

Our long-term community presence ensures cultural competence and established relationships/ referral networks

Efficiency

As case managers and human services providers, we can navigate the recovery ladder and offer holistic care

We understand the people behind the data.

From Immediate Needs to Long-Term Recovery

Immediate Needs:
Shelter, Food, Crisis Support, Resource Navigation

Recovery:
Case Management, Housing Stabilization, Benefits Enrollment, Recovery Planning

A seamless pathway from crisis to recovery.

Nonprofits provide community intelligence before, during, and after disasters.

Moving from reactive to proactive.

Establishing standing LTRGs and pre-establishing recovery contracts allows local awareness to boost innovation and response – helping clients faster and more effectively.

Emergency Managers
Preparedness and Response Capabilities

Nonprofits
Trust, Community Access, Accessibility Expertise, User Investment

Private Sector
Innovation, Technology, Investment

Together

Better Innovation and Adoption, Better Access, Better Outcomes

Community-Informed Technology Creates Better Outcomes.

Who will use this solution?

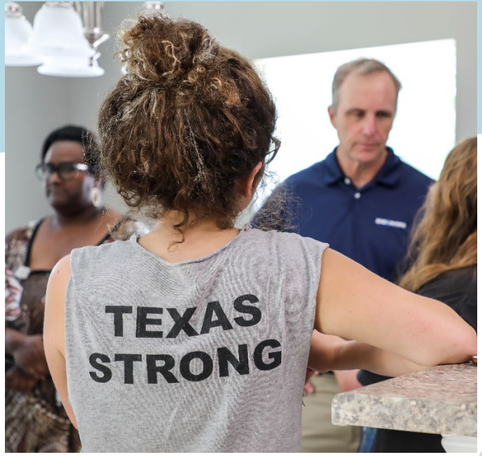

Is it accessible?

What barriers exist?

Will residents trust it?

Technology is **most effective** when **designed with the communities it serves.**

Nonprofits have those insights and can **help you design to meet the need.**

Spotlight: Summer 2025 Texas Hill Country Floods

- Provided **hygiene kits, muck buckets, food support, and pro-bono case management** immediately
- Providing services under a standing state contract and leveraging **12 years of local community experience**
- More than a year later, **we continue serving local first responders, relief workers, and residents**

Spotlight: 2022 Florida Hurricanes

- **Local experience guided** our outreach via direct engagement, partner organizations, and community referrals.
- Programs available for **case management, veteran support, behavioral health, and more.**
- Our teams **continue to guide families from crisis** response to permanent housing and security.

Bring Nonprofits to the Table
Before Disaster Strikes

Plan
Exercise
Design
Respond
Recover

Together

Nonprofits are preparedness, innovation, and recovery partners.

Making a Regional Capability Deployable

Highly Infectious Disease (HID) Specialty Ambulance
EMAC Mission Ready Package

David Long, MA, NRP
Executive Director, Tidewater EMS Council, Inc. | OEMS Region 7, Virginia

The Challenge: A Capability No One Will Carry

Low frequency

Near-zero call volume in a normal year

High consequence

When it's needed, it's needed within hours

High fixed cost

Trained crews, PPE, decon, and isolation-configured units

Can't be built on demand

Readiness takes months, not hours

No locality will fund it. No commercial provider can carry it on speculation.

The Hidden Problem: Invisible and Unpayable

The capability existed

Trained crews and equipment inside private ambulance providers

It couldn't be requested

No way to find, type, or send it through EMAC

It couldn't be paid for

No reimbursement mechanism if deployed

A capability you can't request and can't pay for is a capability you don't have.

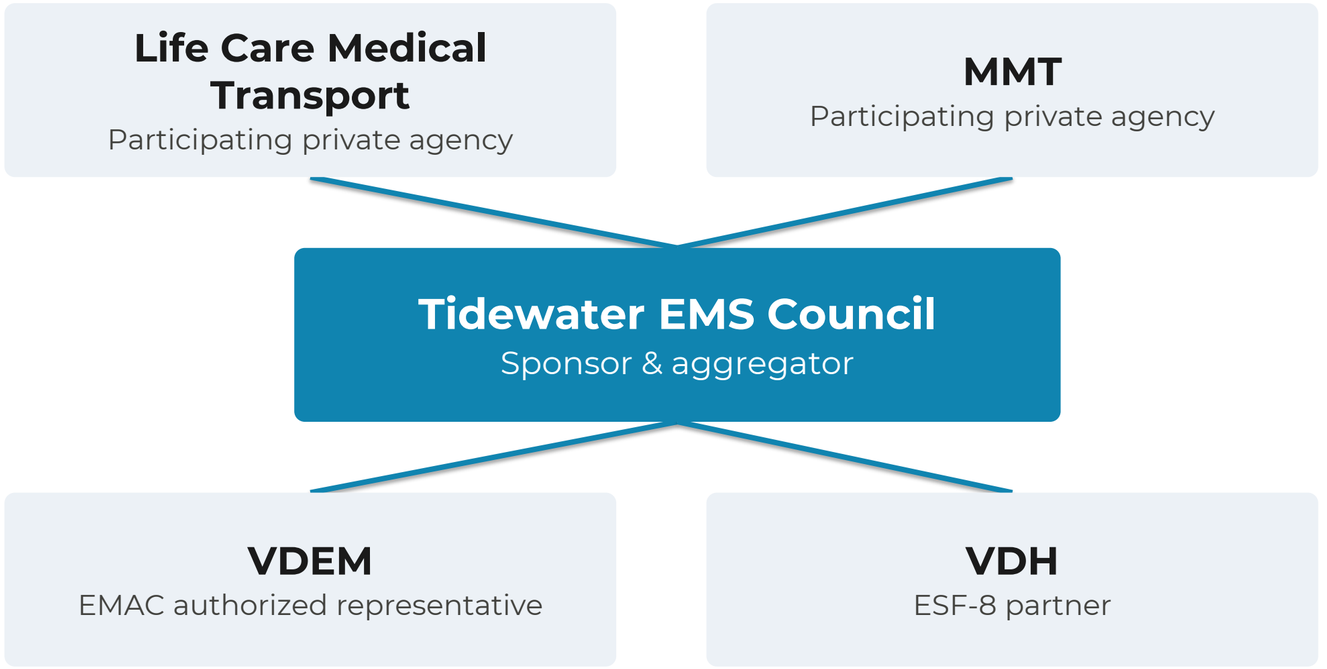

The Solution: Package It

Region 7 built a complete EMAC Mission Ready Package

Deployable HID Specialty Ground Ambulance Transport Unit

Defined in advance:

Personnel · Equipment
Cost estimate · Mission scope

Two Design Decisions That Made It Work

1. Honest scope

- Reviewers identified clinical gaps
- Scoped to BLS / stabilized-ALS isolation transport, not critical care
- Clear Clinical Direction and Level of Care section

A state can plan around an honest capability statement.

2. Payment solved in blue sky

- Reimbursement construct designed with VDH's State Hospital Coordinator
- Region 7 serves as financial aggregator for participating agencies
- Funding pathways: CDC CoAg, PHEP, HPP, or sum sufficient

Decide who pays before the activation.

Results: Same Trucks, New Status

BEFORE

- Informal
- Invisible to EMAC
- Unpriced
- No way to get paid

NOW

- Packaged as an EMAC Mission Ready Package
- Clinically defined (BLS / stabilized-ALS)
- Cost-estimated
- Requestable, with a funding pathway and named agencies

The nonprofit absorbed the planning, compliance, and financial-intermediary burden that neither the providers nor the state had capacity to carry.

THE TAKEAWAY FOR STATE DIRECTORS

NGO and non-profit capability can't be surged.

Either you invested in it before the event, or you don't have it during one.

Find them

Fund their readiness

Write them into your plans

Safe. Informed. Connected.

How local public radio stations contribute to public safety

American Coalition for Public Radio

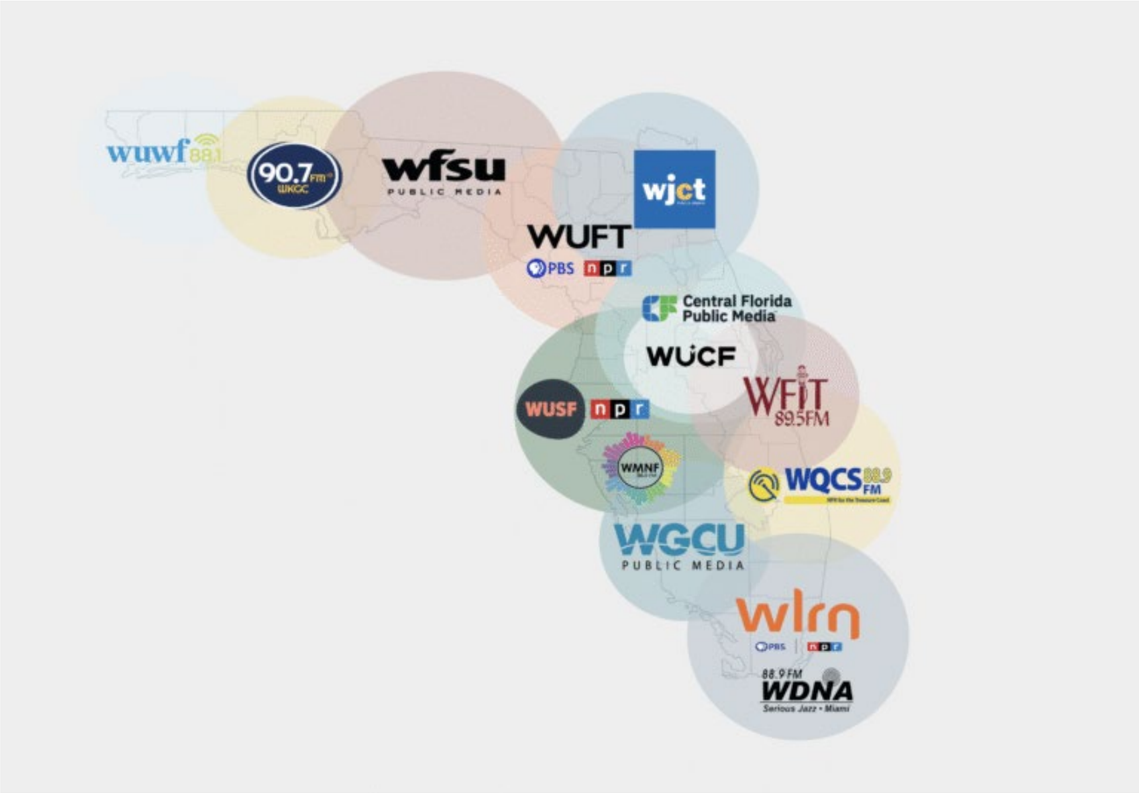

..how public radio keeps Americans safe, informed and connected before, during and after emergencies.

Safe

FLORIDA PUBLIC RADIO
EMERGENCY NETWORK

FPREN: Emergency Information around the Clock

Broadcasting emergency alerts

All public radio stations are full partners in their EAS networks, including those in Florida.

Florida stations take the next step

Collectively provide 24/7/365 content during weather events. The service reaches 23 million Floridians piggybacking on the reach of the state's public media organizations. FPREN has taken a proactive and ambitious approach to ensure residents have critical emergency information.

Real life impact

“This ensures that local public media brands continue to meet people where they are regardless of the platform, while maintaining a commitment to free, over-the-air access for all people, especially critical during crisis situations.” - Randy Wright, FPREN Founder

Informed

“You were my lifeline”

Blue Ridge Public Radio

The station broadcast **continuous emergency programming**, reading official briefings live and translating updates into Spanish each evening. **Listeners later told staff that for many days these broadcasts were the only information they could access.**

Radio persists

When internet and cell towers go down, radio proves to be an extremely durable medium. **Listeners described parking their cars at the ends of long gravel driveways or placing hand-crank radios on mailboxes just to hear the day’s updates.**

Reporting that stays

Local public radio stations cover the long tail of emergencies - the immediate response and the years of recovery. **Partnerships with public radio stations are partnerships that last.**

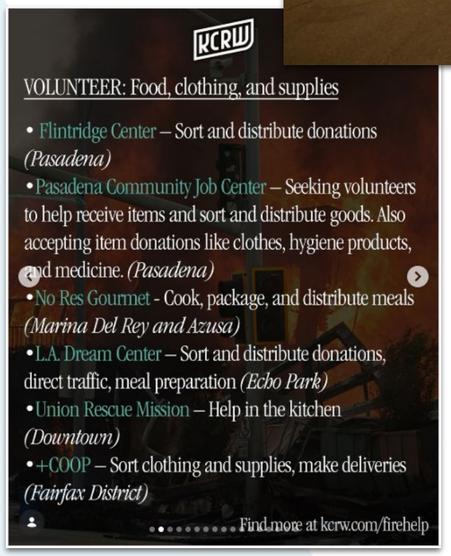

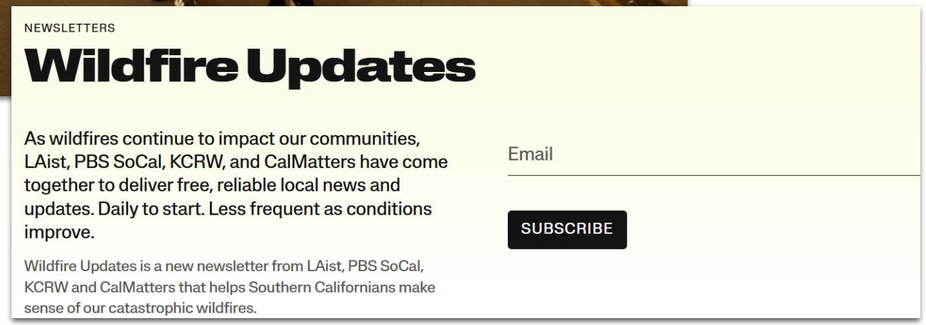

Connected

Fostering collaboration and connections

The aftermath

The historic fires that impacted the Los Angeles area in 2025 put extreme stress on neighborhoods and the municipal leaders, elected offices and nonprofits who served them.

Public radio stations immediately pivoted from covering the disaster to covering how neighbors could help each other.

A connected network of committed local institutions

Because public media stations are often anchors for their local media ecosystems, **they're able to partner with other local news outlets, collaborate with the network of nonprofits responding the crisis and help neighbors lend a hand.**

Connect with your public radio stations

Include them in information planning and outreach

Consider how your state may be in a position to fortify essential broadcasting infrastructure
